

TopView is a comprehensive, cost-effective alarm notification and management solution.

Ideal for utilities (energy, water, wastewater), data centers, oil and gas, manufacturing, chemical, and other facilities and operations, TopView integrates easily with SCADA and industrial software. With TopView, you can quickly identify and precisely respond to abnormal conditions, greatly reducing risk and saving time, effort, and budget.

POWERFUL, PRECISE CONTROL

Easily configure and synchronize alarms, manage acknowledgements, and set priorities from SCADA to TopView.

HEALTH MONITORING AND REDUNDANCY

TopView automatically monitors all designated system parameters to ensure continuous operation within desired ranges. Any health warnings are immediately surfaced prominently in the TopView applications, and users can create notifications tailored to specific scenarios. This includes use of multiple channels (voice calls, emails, text messages), recipients, and alert content. Users can also receive periodic health reports on the current state of all configured features, and setting up a redundant / failover system is both simple and cost-effective.

DETAILED REPORTING AND ANALYTICS

Readily access detailed activity data, including individual alarm and notification tracing, alarm snapshot displays, and ad-hoc and scheduled alarm history reports. Built-in analytics quickly show nuisance alarms, alarm flooding, and alarm history trends.

DESKTOP AND MOBILE APPS

Use the TopView Remote Viewer desktop app to monitor values, acknowledge alarms, and access key data and capabilities (streamed audible alarms, functional grouping, customized views, alarm history, analytics, and reporting). Enjoy the convenience of the dedicated Mobile Web App to monitor alarms and values and acknowledge alarms, with filtering by group and alarm state.

PERSONALIZED NOTIFICATIONS VIA MULTIPLE CHANNELS

Define a tailored notification escalation process and custom messages for alarms with bi-directional acknowledgement via any combination of notification channels:

- Audible text-to-speech
- Email
- SMS text
- Phone (VoIP)
- Microsoft Teams
- WhatsApp
- Pushover
